Integrated Engineering Solutions: An Introduction

Market View 2014

India's ER&D Globalization and Services Market expected to grow from \$18.2 Bn in 2014 to \$38 Bn by 2020 (CAGR – 12%)

Key trends in Global Engineering & RD services

Industry trend

Alternate Business models

Increased embedded content in products and increase of software products

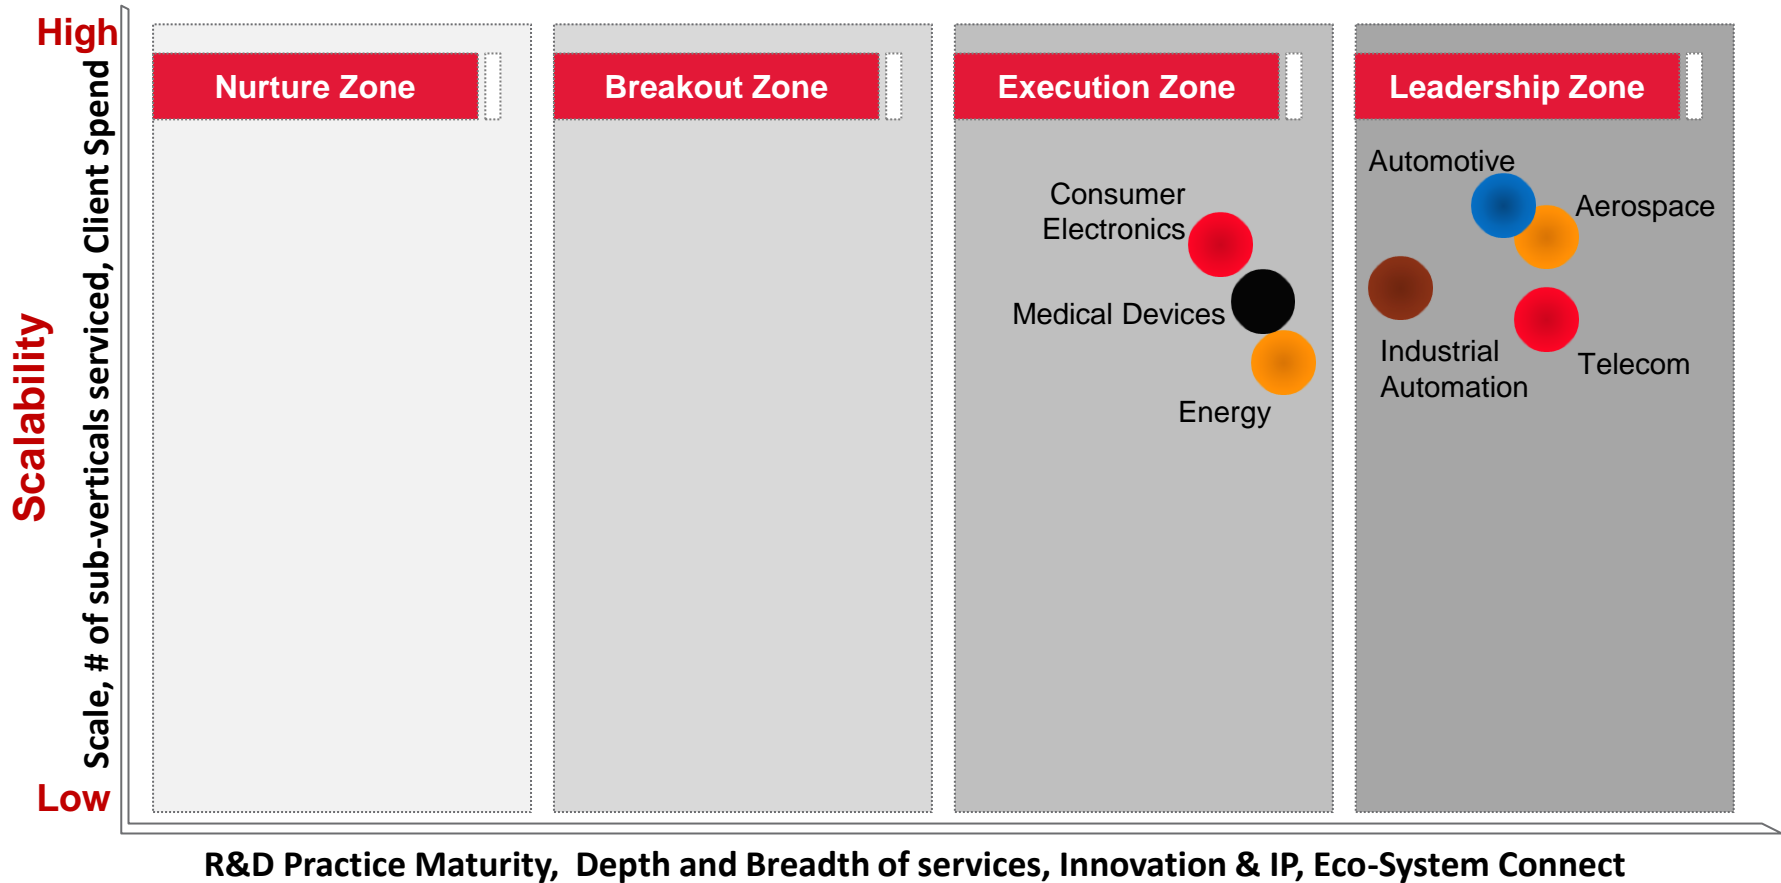

Scope of outsourcing is changing fast

Technology, Efficiency, Digitization

Proof points

- Carve outs, Solution led selling, out come based business models
- Product Sustenance being transferred
- Software product services growing at 17-18%
- Embedded and Electronics content increased to 25% - 40% of the R&D spend
- Drivers are changing from cost reduction to IP generation and Innovation
- Co-develop with customers on products for emerging markets
- Aftermarket/Customer Services
- Autonomous cars, Drones, UAV, SDN, IOT, Mobility, Cloud at play
- Emission and regulatory compliance

Zinnov Positioning

Leadership Position in Automotive, Aerospace & Defense , Hitech verticals

MES Integration helping expand automotive footprint

Success Stories

Alternate Business Models

Steam Turbine monitoring and diagnostic program

- Real-Time Remote Monitoring & Diagnostics application for steam turbines in the field
- Integrated with Data center/ network services
- 90% man hours reduced from the manual process

SDN Applications launched in HP App. Store

TechM and HP partnered to launch TechM SDN Applications running on HP VAN Controller

- TechM has launched Smart Flowing Steering and Smart Load Balancer Applications which are publicly available for download on HP App Store
- Multiple other Applications like UCP, HNI are currently being developed

Increased Electronics/Software in products

Digital Health – Test Factory

- Consulting for Test Strategy development for a digital health platform development program.
- Implemented a Scrum based agile methodology for this test driven development program.
- Complete testing ownership for functional & non functional testing like security, performance testing etc..

Development of New Emerging Platform for Infotainment system for an OEM

- Vehicle Integration for the Infotainment product is done by TechM
- Tuner – FM, AM, RDS, Media - USB, Ipod, Aux, CD, IR, BT, Cluster Display
- Robust Integration strategy – Key for multiple releases from distributed teams.
- SOP program support for emerging markets under strict timelines

Success Stories

IP Generation/Co-Development

Connected Cars – IP development for Japanese Major

- Automotive : Focus Technology Themes:
- Connected Cars (V2X, Car to Cloud)-X can be vehicle(V), Infrastructure (I), Smartphone
- Autonomous vehicle and advanced driver assistance systems
- Wearable devices in vehicle environment

Design & Development of Airborne Diesel Engine for Unmanned Aircraft (UAV)

- Feasibility studies for adopting automotive diesel engine for Aerospace application in collaboration with Mahindra group company
- 4 Stroke – 4 Cylinder - Turbocharged Diesel Engine
- With Gross power of 170 BHP

Technology, Efficiency, Digitization

Benchmark & Emission Norms compliance for an US CE OEM

- Complete responsibility for vehicle upgrade from Tier III to Tier IV
- Redesign of entire vehicle layout to accommodate - New engine, After treatment devices, cooling module & other related subsystems
- Savings of > USD 12 million over engagement duration

Smart Elevator Platform

- Mobile app allows to place elevator request before even reaching source station. Hence, saves time.
- App uses historical data to suggest frequently visited stations.
- App allows for advanced features like ADA.
- Integrated central analytics to embedded controllers
- Improve the energy efficiency by 20%

Tech Mahindra on Thursday said it had partnered Texas Instruments to set up a lab in Bangalore to launch innovative solutions based on the concept of Internet of Things (IoT). This lab will allow Tech Mahindra to launch innovative solutions based on the concept of Internet of Things (IoT) in industrial, medical and automotive sectors, Tech Mahindra said in a statement.

IoT is an evolving space as billions of devices are being connected on the go and consumers are looking for intelligence from connected devices, equipment and infrastructure. — PTI

Skoda India begins putting its house in order

Sudhir Rao, CMD, wants to create an Indian and Czech fusion for product planning.

When Skoda entered the Indian market a little over a decade ago, not many people had heard of the company. Yet, it just took a single brand like the Octavia to establish the Czech automaker as the first mover in the premium sedan segment.

After this dream start, a lot was expected from Skoda especially when parent company Volkswagen also decided to set up shop in the country.

The two went in for a common platform strategy at a new facility near Pune which resulted in the rollout of premium hatchbacks (Polo/Fabia) and sedans (Rapid/Vento). On paper, it was a perfect script, except reality was a different ballgame. Today, Skoda is a marginal player in

Paradigm shift in a little over two years since Sudhir Rao took charge at Skoda, there has been a lot of change with the culture evolving towards becoming more customer-

Fine line

For the moment, Skoda has the Rapid platform to work on and has acknowledged the need to approach it with a "little more Indian/Asian strategy" in investments and costs. It is here that Mahindra Engineering Services has been roped in to help 'Indianise' the overall thought process.

The goal now is to find the sweet spot which boils down to "how low compromising on brand character".

It is an interesting initiative in fusion of cultures where the best mix the basis for the future.

This is precisely what Skoda is doing with the Rapid facelift in tandem with Mahindra Engineering Services. Once things are in place by the year-end, the company will launch the Rapid to the small segment.

Premium hatchbacks

According to Rao, premium hatchbacks will gradually become more po

Tech Mahindra wins engineering solutions deal from Bombardier

Tech Mahindra working on driverless cars and drones

SHARE · PRINT · T+

S RONENDRA SINGH

New Delhi, April 8: Its not just US information technology companies such as Google working on driverless cars and drones, home-grown tech company Tech Mahindra is also working on similar projects as part of its machine-to-machine offering.

For example, the company is working with some major international car companies on using big data analytics to understand driver behaviour.

Karthikeyan Natarajan, Global Head - Integrated Engineering Services, Tech Mahindra, told Business Line that auto companies are looking at a digital cockpit that will remove the rear view mirrors by replacing them with cameras that will stitch the images.

Fuel efficiency

"It will also lead to increased fuel efficiency," he said declining to disclose the names of the companies. The plan also includes features such as self-parking and driverless cars, which may come in next three years, Natarajan said, adding that such business will be the fastest growing (30-40 per cent) in next 5-7

Thank you.
