Tech Mahindra

Tech Mahindra Empowers Diamondlease to Adopt Oracle Cloud Infrastructure (OCI)

Overview

Diamondlease L.L.C, a member of the Al Habtoor Group, was established in 1996 to offer automotive rental and leasing solutions as an alternative to owning and maintaining vehicles to corporate and individual customers in UAE. Diamondlease is an ISO 9001:2015 certified company with a fleet of over 12,500 dealer-maintained vehicles. A pioneer in its field, Diamondlease was the first local car rental firm in the UAE to receive an ISO certification and has proudly held the accreditation since 1999. Diamondlease selected Tech Mahindra as its preferred partner due to its proven expertise and experience in implementing Oracle Cloud Infrastructure (OCI). TechM helped Diamondlease migrate their EBS along with the car rental solution to OCI successfully leveraging CAMEO Platform.

Client Background and Challenge

Faced with the challenge of aging infrastructure impacting the performance of Oracle E-Business Suite along with the niche custom solution for automotive rentals, Diamondlease evaluated various options and strengthened on OCI as the choice to permanently resolve this issue. The performance benefits of OCI adds value for Diamondlease in this choice.

Tech Mahindra has been managing the Oracle EBS applications for Diamondlease in this migration, as a part of an OCI initiative and delivered a robust environment. Leveraging the lift services offered by Oracle along with a deep knowledge of business processes that TechM carried, the EBS along with complex car rental solution was successfully migrated with comprehensive testing of the solution ensuring the application availability across the headquarters and the country-wide offices. Cloud aligned modernization of enterprise-wide Oracle (CAMEO) platform played a major role for the successful OCI migration.

Our Approach and Solution

▶ Scale up their business application availability while reducing the overall cost by adopting Oracle Cloud Infrastructure (OCI)

▶ Tech Mahindra with its expertise and experience in OCI migration helps with a robust security and configuration. This is powered by Oracle to handle the security and compliance, reducing audit duration and costs

▶ Ease in integration with existing systems, both on-premise and cloud

▶ Provides quicker and more predictable overall performance, better pricing and security, with enhanced compatibility for enterprise workloads

▶ Reduction in any disruption to business or downtime

▶ Safeguarding the layers with built-in firewalls, DDoS, and encryption

▶ Increased agility which adds capacity with speedy provisioning and clones EBS systems in minutes providing high accessibility and resiliency

Business and Community Impact

Successfully adhered to the OCI lift and shift activity within agreed timeline

Completion of migration with EBS and custom rental solution

Completed the migration of third-party integrations

Duly completed the necessary pre-requisite patches mandatory for OCI migration

Effectively interacted with Oracle team for the smooth migration of on-premise EBS to OCI

Successfully completed multiple iterations for the successful OCI lift and shift
