

Clinical Data Analytics for Japanese Major

Business Problem

Local Clinical data information unavailable globally

Solution to address constraint locally, is an expensive proposition

Uncertainty about quality of deliverables with new offshore vendors

Strategic intent - Global Standardization of clinical trial data

Our Solution

Development of SAS programs for conversion of datasets to Global datasets

Multiple iterations of validation at end of each cycle

Reconciliation with original datasets through reverse conversion

Value Delivered

Development of SAS programs for conversion of datasets to Global datasets

Multiple iterations of validation at end of each cycle

Reconciliation with original datasets through reverse conversion
