

Client: A global port operator in Middle East**Business Challenge**

- Create TMS (Traffic Management System) application for Traffic which will be integrated with multiple internal 3rd party application to provide all the details to TMS.
- Currently the traffic department team has to manually check through various application to get Truck details (IN & OUT time, Container details, Inspection details etc.) of a particular container, with this system the expectation is to have all system integrated in one and to generate one report with all the required details.

Tech Mahindra's Solution/Tools Used

- An Application, Traffic Management System (TMS) with one single unified Dashboard where details from all applications are shown together
- Integration and extract data from various systems using Web Services exposed by the respective systems
- Combine/Aggregate data extracted from all systems based on a common field say Truck No and create an XML file with all the aggregated details
- Get Turn Around Time (TAT) for each Vehicle is one of key KPI for the port.

Business Benefits

- The created database will have all extracted data from various systems which will be the source to pull various MIS reports related to trucks, containers etc.
- Generate a single view of all required data saving time of users to manually check data in various systems.
- This will enable in taking business decisions on reducing overall time spend by the trucks in the port and hence reduce traffic congestion inside the port.

ABOUT TECH MAHINDRA

Tech Mahindra is a specialist in digital transformation, consulting and business re-engineering solutions. We are a USD 4.9 billion company with 121,840+ professionals across 90 countries. We provide services to 930+ global customers including Fortune 500 companies. Our innovative platforms and reusable assets connect across a number of technologies to deliver tangible business value to all our stakeholders.
