# Accelerate your SAP cloud migration

Fast-track and simplify the path to becoming a digital enterprise by moving your SAP and other ERP systems to AWS with Tech Mahindra

What's preventing SAP modernization?

Moving your SAP workloads to Amazon Web Services (AWS) can help you reduce costs and execute a broader digital transformation. However, many companies are unsure how to get started. Let's explore what's preventing migration.

Application readiness
Not all SAP applications are cloud ready. To pave the way for migration, organizations need to assess the gaps and mitigate the blockers.
Lack of expertise
Given the complexity and critical-nature of SAP, organizations need a partner that has the experience of moving SAP workloads to the cloud.

Complex interdependencies
SAP workloads are deeply integrated, with many interdependencies that must be accounted for during migration.

Potential downtime
SAP workloads are critical, connecting lines of business and powering core processes. For some, even minutes of downtime could equate to a seven-figure revenue loss.

78%
Enterprises find lack of resources or expertise as a key challenge to using cloud

Execute your SAP cloud strategy with Tech Mahindra

Streamline your path to the cloud by leveraging wide-ranging, integrated solutions from Tech Mahindra and AWS. Here's how our tools and resources solidify your SAP cloud strategy.

TECH MAHINDRA MIGRATION ACCELERATOR TO CLOUD (MAC)
Migrate SAP workloads to AWS and lay the foundation for modernization

Accelerate your SAP transformation by moving your critical workloads to the cloud without altering the application or database layers.

Migration assessment and framework
Identify the best path for migration and validate success throughout the process.

Agile-based methodology
Streamline and accelerate your migration by moving applications in sprints.

Factory model migration
Move SAP workloads via a repeatable, predictable, and secure process.

### TECH MAHINDRA EPSELON – SAP AUTOMATION PLATFORM
Drive SAP transformation with cloud-based automation

Swiftly embark on the SAP transformation journey and choose the optimal path – SAP EHPx, SAP HANA database, or SAP S/4HANA.

Running your business
Monitor critical processes, customize your system processes, and optimize user licenses

Digital journey
Outline your transformation roadmap and migrate to AWS

Change management
Gain complete visibility into transformation risk, leverage global templates, and perform change impact analysis

Drive business value
Harness the value of S/4HANA and AWS to drive measurable business outcomes

53%
Organizations seek a third-party to help with security during transformation
