

Tech Mahindra's High Performance Data Management Solution with IBM for ADAS Development

A scalable, software-defined infrastructure powered by TechM – IBM, the ADAS solution helps to mitigate the complex ADAS/AD development processes from data collection to enrichment (preparation, cleaning, labeling), AI ML/DL algorithm training, simulation, validation, test drives, and data retention for governance.

Solution Benefits

Increased development cycle efficiency

70% Improved AI training time

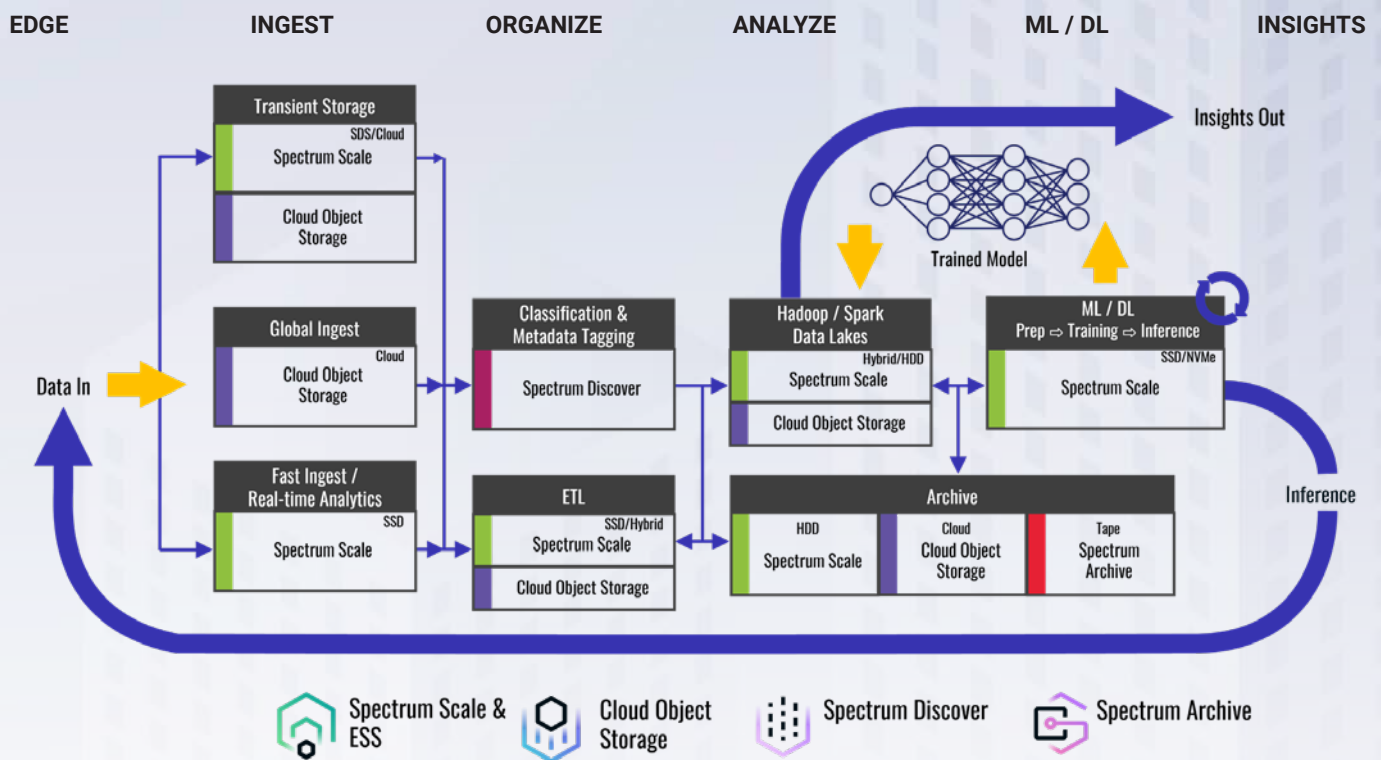

Automated data governance

14X More deep learning experiments

Enterprise Data Pipeline with IBM Spectrum Storage “Ingest to Archive”

IBM Storage brings high-performance and throughput

Multi-protocol data access

GPU-direct storage access delivers low latency and high bandwidth

GPU-direct storage access delivers low latency and high bandwidth

Metadata curation enables increased AI.

Single name space for data access

Data resiliency, security, and governance

Data resiliency, security, and governance
