- GPACK to standard modules/frameworks

Talent Pool

- 650+ Temenos consultants
- Upgrade certified and experienced consultants
- Global presence and expertise

Success Stories

Tech Mahindra helps a leading commercial bank in Vietnam by upgrading to Temenos Transact.

Tech Mahindra partnered with the bank to perform transformation of their existing Temenos T24 R14 to the Temenos Transact R18, including a migration to the Java platform (TAFJ), migration to a new hardware (first LinuxOne implementation of Temenos), upgrade to a new release of database, and a transition from the existing Desktop UI to the new Browser UI. Tech Mahindra's out of the box factory approach helped the client to reduce the conversion and migration timing. Tech Mahindra assisted the client to develop local solutions for improved functionality with limits and internet banking.

Tech Mahindra performs Temenos Transact Upgrade project for a leading bank in UAE.

In order to take advantage of the new modules and functionalities, the bank turned to their trusted partner Tech Mahindra to perform the upgrade for them for third-time in a row. This project helped the client to move to the latest R19 release and as a result, the bank successfully rolled out new products/functionalities and services in both conventional and Islamic banking. Tech Mahindra provided extended support during SIT, UAT, go-live execution, post-live support, and warranty period to ensure a seamless transition between versions.
